H₂WOW!

H2WOW is a trading name of Quicktec Ltd

H₂WOW! TIPS FOR USE

Your H2WOW bottle is not like a standard bottle: the water has to pass through the filter before it gets to your mouth.

Gently squeeze the bottle body at the same time as you suck! This way you'll get a nice steady flow of water.

The bottle is designed to be squeezed either in the wasted mid section or towards the base. You will eventually develop your own technique.

Don't worry if you don't get it the first time: in tests most people do... it just takes a little practice. Soon drinking from your H2WOW bottle will be second nature!

To enjoy chilled water, the bottle opening is large enough for you to add your own ice cubes.

DO NOT USE IN DISHWASHER

**DO NOT EXPOSE OR LEAVE IN
DIRECT SUNLIGHT**

**DO NOT FILL BOTTLE WHERE WATER
IS MICROBIOLOGICALLY UNSAFE**

CARE & USAGE INSTRUCTIONS

H₂WOW!

Congratulations on choosing your **H2WOW!** filter water bottle.

Using **H2WOW!** will change your drinking habits for the better, save you money, save the planet and help to save a Life!

The carbon based filter system makes for cleaner, healthier and better tasting water.

It removes organic contaminates from regular tap water and reduces the chlorine taste and odours.

Please read these instructions thoroughly and keep for future reference.

Your bottle is intended to filter **TAP WATER ONLY**.

**HAND WASH ONLY IN LUKE
WARM SOAPY WATER -
DO NOT USE IN DISHWASHER**

BEFORE FIRST USE

Firstly unscrew lid and remove carbon filter from its housing. Soak carbon filter in hot water for 2 minutes.

Rinse all other bottle components in luke warm, soapy water, and rinse off soapy water thoroughly with cold water.

Screw filter back into housing lightly and filter housing back onto cap.

Fill the bottle with cold tap water and gently squeeze until one full bottle of water goes through the filter one time.

This removes any possible carbon residue from the filter. Small particles of carbon may appear in the water on first use.

Carbon is an organic substance that can be safely ingested. This will reduce after several uses.

Rinse bottle and nozzle 1 more time thoroughly using cold tap water.

BOTTLE CARE

Unscrew the filter housing and remove carbon filter. Hand-wash bottle, nozzle and filter housing in warm, soapy water and then rinse in cold to luke warm water.

Once a week soak the active carbon filter in hot tap water for 2 minutes.

Replace your filter after 300 uses / Approx 3mths based on 3 fills a daily.

Your bottle is for use with **COLD TAP WATER ONLY**.

Do not put your bottle in the freezer.

Do not microwave or fill bottle with heated / hot liquid.

Do not use where water is microbiologically unsafe or of unknown quality.

**DO NOT OVER TIGHTEN FILTER
HOUSING AND CONNECTION TO
BOTTLE. USE YOUR FINGER TIP
TO SCREW & TIGHTEN.**
